## Hardening and wear-resistant agent

### S-500

#### Features and advantages:

Hardening and wear-resistant agent S-500 is mainly suitable for epoxy powder coating, polyester powder coating, but also suitable for plastic paint/ink/wood paint and other coatings.

1. Improve the wear resistance of the coating
2. Increase the scratch resistance of the coating surface
3. Good compatibility of resin

#### Product specification:

appearance	White powder
hardness	<0.5dmm
Fusing point	130℃
density	0.975 (g/cc )

#### Addition amount and use method:

1. In the process of coating production, the addition amount of stiffening wear-resistant agent S-500 is generally between 0.5-2%
2. Add raw materials together during pre-mixing

**Packing:** Paper-plastic composite bag, net weight: 20kg/bag

**Note:** The conditions and ratios listed in this manual are for reference only. Before using, please Make appropriate adjustments according to the specific equipment, materials, environment and application
