

## Anti-graffiti agent

### RT-3133

#### Features and advantages:

This product has a reactive active group, can form a chemical bond with the resin, so that the film surface to obtain hydrophobic, oleophobic, reduce dust, improve the film washing permanent effect. This product is also used to improve anti-graffiti, anti-paste performance. It is an organosilicon surface additive specially developed for easy cleaning coating system.

- 1, excellent anti-graffiti, anti-sticking and peeling.
- 2, suitable for acrylic coating system, UV light curing coating system
- 3, the best compatibility of a product.

#### Product parameter:

Appearance	Colorless transparent to slightly cloudy viscous liquid
Effective portion	100%
Viscosity (25°C, mPa.S)	5000-30000
Ingredient	Modified acrylic acid polydimethicone

#### Application:

UV system, other acrylic systems

#### Recommended dosage:

0.8-3% of the total formula

#### Use:

Can be added at any stage of the production process

#### Packing:

25KG/ barrel, 200KG/ barrel
